SOME CURIOSITIES.

Different Lengths of a Mile—How a Road Was Determined.

The standard yard prevails throughout the United Kingdom, but the lengths of the English, Scotch and Irish mile is different in each, which is the more curious, seeing that the English and American miles are identical. But the occasional local variations in our English acre are even more remarkable. These were perhaps originally due to the inexactitudes of ancient land surveying, which was comparatively of such a free and easy description that the acres of neighboring counties, not to say adjacent parishes, sometimes varied.

A book published in the reign of Edward VI. gives the following curious half instructions on the subject: "Stand at the door of a church on Sunday and bid sixteen men to stop, tall ones and small ones, as they happen to pass out. Then make them put their left feet one behind the other, and the length thus obtained shall be a right and lawful rod to measure the land with, and the sixteenth part of it shall be a right and lawful foot."

This is almost laughable, but we have only to apply to one of the older dictionaries to find that anything like exactness, whether of definition or of fact, is quite a modern scientific development. And the story of the acre is a case in point. It was supposed to have been reduced to a common standard in 1305, but it was not until 1824 that we enacted the statute acre of 4,840 square yards.

With the loose system of measurement prevailing for the greater part of that long interval, it is not surprising that the so-called "acre" was too often what the local vicarages happened to make of it. By long use and wont it seems probable that the discrepancies thus arising occasionally crystallized into customs, of which some examples still survive. A Welsh acre was formerly twice as large as an English one, while a Scottish acre is larger than ours by more than 1,000 square yards.

According to authority, there are seven different measures still in use by which the acre may be variously defined. Lancashire has within her borders acres measured on a customary local scale, while the so-called Cheshire acre is even larger than that of its Welsh neighbor.—London Globe.

The Continuous Challenge.

Jimmy—Aw, no wonder yer kin lick me. Yer two years older'n me. Mick—Well, come round when yer as old as me an' I'll lick yer den too.—Judge.

Good manners are made up of petty sacrifices.—Emerson.
